Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	2/23
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020.08.24.

## I. Hardware

Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	3/23
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020.08.24.

## 1. Technical data

Supply voltage:	5 V DC SELV
Supply current:	max. 1 A
Isolation class:	Class III
Mechanical size:	71 x 71 x 27 mm
IP protection:	IP 20
Mass of cover:	termoplast (ABS)
Communication:	Wireless LAN, TTL 3.3V serial port
Getting data:	via HTTP
Administration:	via serial connection

## 2. General description

This device can measure temperature and humidity of growing house air, and detect some unwanted gas (CO<sub>2</sub>, NH<sub>3</sub>, NO<sub>x</sub>, alcohol, benzene etc.) and smoke, and has got three different color status LED. The measured values can be queried and LEDs can be turn on and off via wireless network via HTTP. The device box contains only the temperature and humidity sensor, the gas sensor must be connected with a short cable.

## 3. Schematic and PCB draws

The wiring diagrams of the device is shown in Annex 1, PCB draws are in Annex 2-4. You can download it as part of the complete documentation or in separate PDF, SVG and KiCAD formats from the developer/manufacturer's website. The Gerber files needed for production are included in the package.

## 4. Other draws and documents

Documentation package contents mechanical draw of used box in PDF.

## 5. Terms of use

Hardware documentation can be modified and/or redistributed under the Creative Commons 4.0 Attribution Non-Commercial (CC-BY-NC-4.0) License. You can read the full text of the license online. (Refer to Chapter III for references.)

## 6. Look of unit

### a) Manuals and connectors

1. POWER signal light (white LED)
2. ACT signal light (blue LED)
3. STATUS signal light (green LED)
4. STATUS signal light (yellow LED)
5. STATUS signal light (red LED)
6. Power supply connector (P1)
7. Console connector (P2)
8. Cable of external gas sensor

Figure 1: Manuals and connectors

### b) Internal construction

1. Microcontroller (U101)
2. DHT11 sensor (U103)
3. Connector of external gas sensor (U102)
4. Cable of external gas sensor (U102)
5. Power voltage connector (P1)
6. Console connector (P2)

Figure 2: Internal construction

### c) Pinout of connectors

connector	pin	function	note
P1	center	+ 5 V supply voltage input	ø 5.5/2.1 mm power connector
	shield	GND	
P2	2	serial port RXD	DB9F
	3	serial port TXD	
	5	GND	
U102	1	+5 V	
	2	GND	
	4	Analog data	

## 7. Downloadable documentation

The complete documentation of the hardware in the .tar.gz format compressed file can be downloaded from the manufacturer's website or Github. (Refer to Chapter III for references.) Name of package is: *mm7d-hw-200620-1.0.tar.gz*.

Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	6/23
	Technical manual				
Name:	Pozsár Zsolt	Date:	2020.08.24.		

## II. Software

Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	7/23
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020.08.24.

## 1. General description

The device measures three characteristics of the air, which can be queried remotely and it has got three status LED, which can be set remotely.

The program displays initialization steps and error messages on the serial console.

When an HTTP request is received, the client's IP address and username argument are checked. If appropriate, perform a measurement or turn the status LEDs on / off. After displays the result on the web interface. Incoming requests are indicated by the flashing of the blue activity LED.

## 2. Setup

You can found source file of software in *software* directory. Before installing the program, you need to set these values:

```
// settings
const char* wifi_ssid      = "";
const char* wifi_password  = "";
const String uid           = "";
const String allowedaddress = "";
```

## 3. Installation

Use a serial cable and Arduino IDE software to install program to microcontroller. Before installation procedure unpack required libraries from *libraries* directory or clone from Github.com to *~/Arduino/libraries/*.

## 4. Using the device

The device operates automatically does not require any human intervention.

### a) Data set and retrieval via HTTP

An example for how to use argument:

<http://192.168.1.12/set/greenled/off?uid=bob>

**URL of information and data pages:**

(On next page.)

## b) Connect to console via serial port

The console connector of the device and the RS-232 serial port of the computer must be connected by means of a level shifter adapter with a null modem cable. The level shifter adapter is required due to the different voltages of the logic levels (0 V / 3.3 V and -12 V / + 12 V).

The console connector of the device and the USB port of the computer must be connected using an Adafruit 954, FTDI TTL-232R-RPI or similar 3.3V serial / USB cable.

### Connection parameters

speed (baudrate): 115 200 bps  
data bits: 8  
parity bit: no  
stop bit: 1  
flow control: no

### Connect via linux terminal

Name of ports (device files):

RS-232 serial port: /dev/ttyS0, /dev/ttyS1, ...  
serial/USB converter: /dev/ttyUSB0, /dev/ttyUSB1, ...

Make sure you are a member of the dialout group:

```
username@localhost$ id
```

If not, set up your group membership:

```
username@localhost$ sudo usermod -a -G dialout username
```

Connect with GNU Screen program:

```
username@localhost$ screen port_name 115200
```

Connect with Minicom program:

```
username@localhost$ minicom -b 115200 -o -D port_name
```

### Connect with Windows terminal (Putty)

Name of ports:

RS-232 serial port: COM1, COM2, ...  
serial port/USB converter: variable, see the device manager

Select the serial connection mode and communication port, set the speed and start the connection.
