Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	2/23
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020.06.20.

I. Hardware

Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	3/23
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020.06.20.

1. Technical data

Supply voltage:	5 V DC
Supply current:	max. 1 A
Isolation class:	Class II
Mechanical size:	71 x 71 x 27 mm
IP protection:	IP 20
Mass of cover:	termoplast (ABS)
Communication:	Wireless LAN, TTL 3.3V serial port
Getting data:	via HTTP
Administration:	via serial connection

2. General description

This device can measure temperature and humidity of growing house air, and detect some unwanted gas (CO₂, NH₃, NO_x, alcohol, benzene etc.) and smoke, and has got three different color status LED. The measured values can be queried and LEDs can be turn on and off via wireless network via HTTP. The device requires 5V DC supply voltage.

3. Schematic and PCB draws

The wiring diagrams of the device is shown in Annex 1, PCB draws are in Annex 2-4. You can download it as part of the complete documentation or in separate PDF, SVG and KiCAD formats from the developer/manufacturer's website. The Gerber files needed for production are included in the package.

4. Other draws and documents

Documentation package contents mechanical draw of used box in PDF and drilling draws in PDF and DXF format.

5. Terms of use

Hardware documentation can be modified and/or redistributed under the Creative Commons 4.0 Attribution Non-Commercial (CC-BY-NC-4.0) License. You can read the full text of the license online. (Refer to Chapter III for references.)

II. Software

Titles:	MM7D Air quality measuring device	Rev.:	200620	Pages:	7/23
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020.06.20.

1. General description

The device measures three characteristics of the air, which can be queried remotely and it has got three status LED, which can be set remotely.

The program displays initialization steps and error messages on the serial console.

When an HTTP request is received, the client's IP address and username argument are checked. If appropriate, perform a measurement or turn the status LEDs on / off. After displays the result on the web interface. Incoming requests are indicated by the flashing of the blue activity LED.

2. Setup

You can found source file of software in *software* directory. Before installing the program, you need to set these values:

```
// settings
const char* wifi_ssid      = "";
const char* wifi_password = "";
const String www_username = "";
const String allowedaddress = "";
```

3. Installation

Use a serial cable and Arduino IDE software to install program to microcontroller. Before installation procedure unpack required libraries from *libraries* directory or clone from Github.com to *~/Arduino/libraries/*.

4. Using the device

The device operates automatically does not require any human intervention.

a) Data set and retrieval via HTTP

An example for how to use argument:

<http://192.168.1.12/set/greenled/off?username=bob>

URL of information and data pages:

(On next page.)

b) Connect to console via serial port

The console connector of the device and the RS-232 serial port of the computer must be connected by means of a level shifter adapter with a null modem cable. The level shifter adapter is required due to the different voltages of the logic levels (0 V / 3.3 V and -12 V / + 12 V).

The console connector of the device and the USB port of the computer must be connected using an Adafruit 954, FTDI TTL-232R-RPI or similar 3.3V serial / USB cable.

Connection parameters

speed (baudrate): 115 200 bps
data bits: 8
parity bit: no
stop bit: 1
flow control: no

Connect via linux terminal

Name of ports (device files):

RS-232 serial port: /dev/ttyS0, /dev/ttyS1, ...
serial/USB converter: /dev/ttyUSB0, /dev/ttyUSB1, ...

Make sure you are a member of the dialout group:

```
username@localhost$ id
```

If not, set up your group membership:

```
username@localhost$ sudo usermod -a -G dialout username
```

Connect with GNU Screen program:

```
username@localhost$ screen port_name 115200
```

Connect with Minicom program:

```
username@localhost$ minicom -b 115200 -o -D port_name
```

Connect with Windows terminal (Putty)

Name of ports:

RS-232 serial port: COM1, COM2, ...
serial port/USB converter: variable, see the device manager

Select the serial connection mode and communication port, set the speed and start the connection.

5. Check operation

You can check operation of controller with a web browser, use index.html in *testpage* folder or open <http://szerafingomba.hu/equipments/mm7d/testpage/> url. It doesn't store any data on server.
